

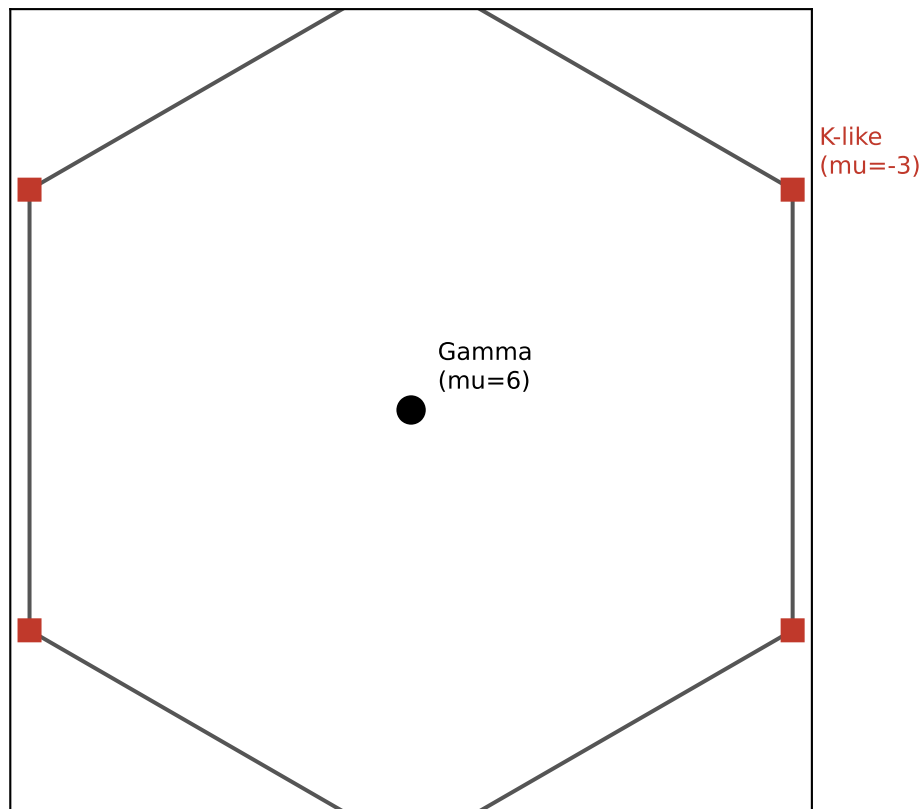

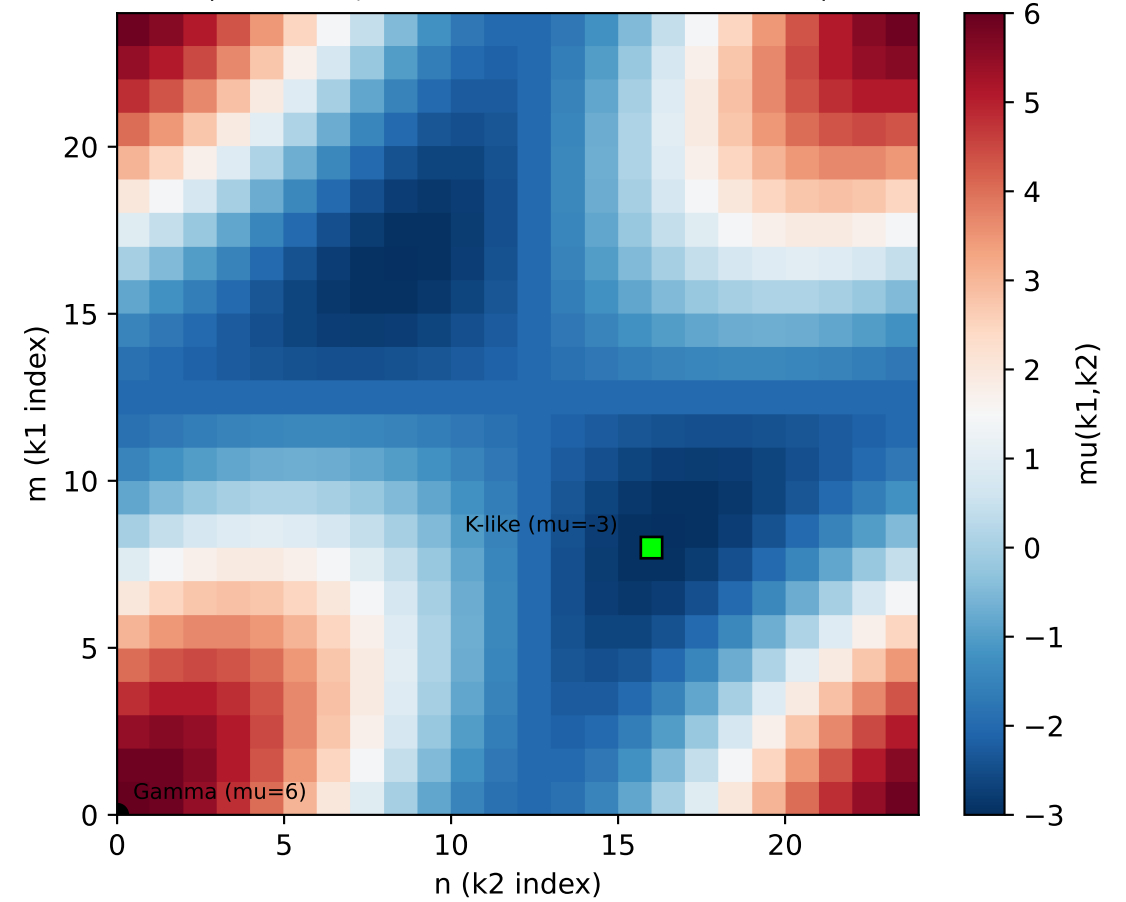

Figure 4 -- Geometry selects the spatial mode

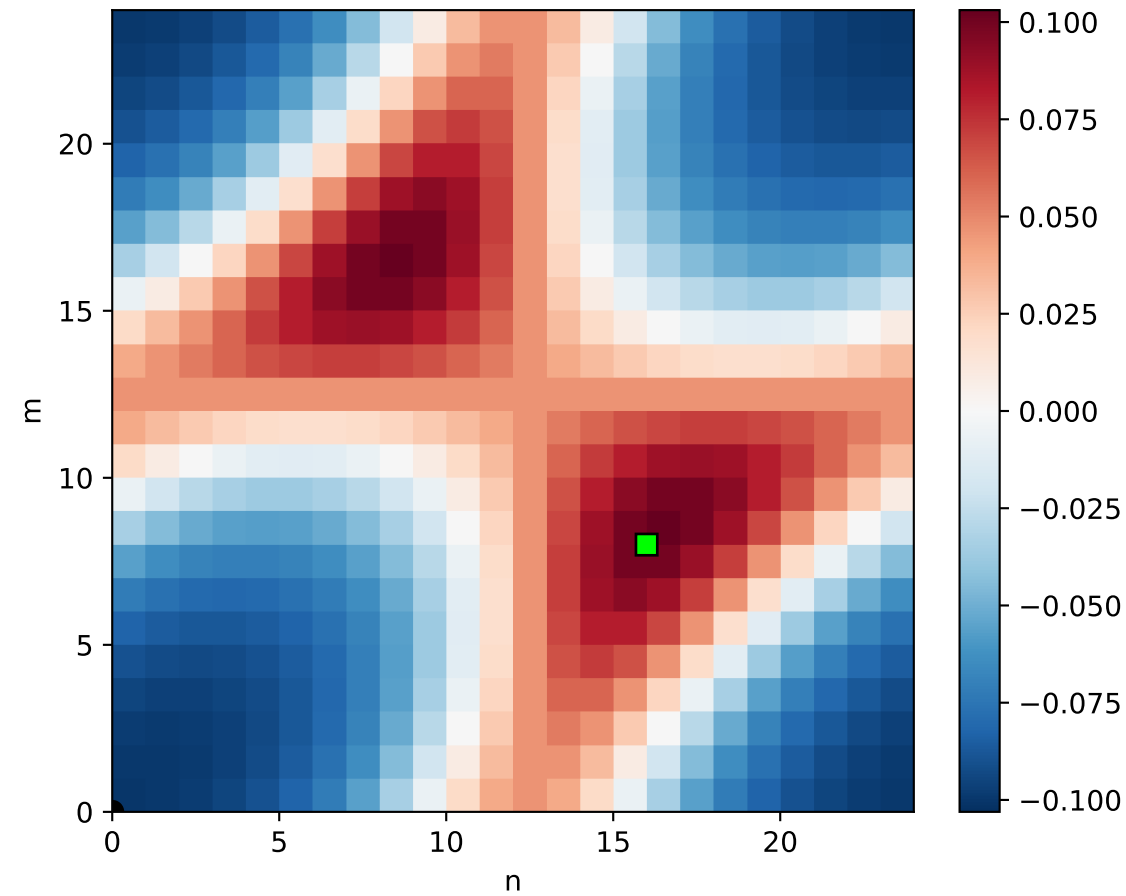

A. Brillouin zone of the triangular contact lattice (schematic)

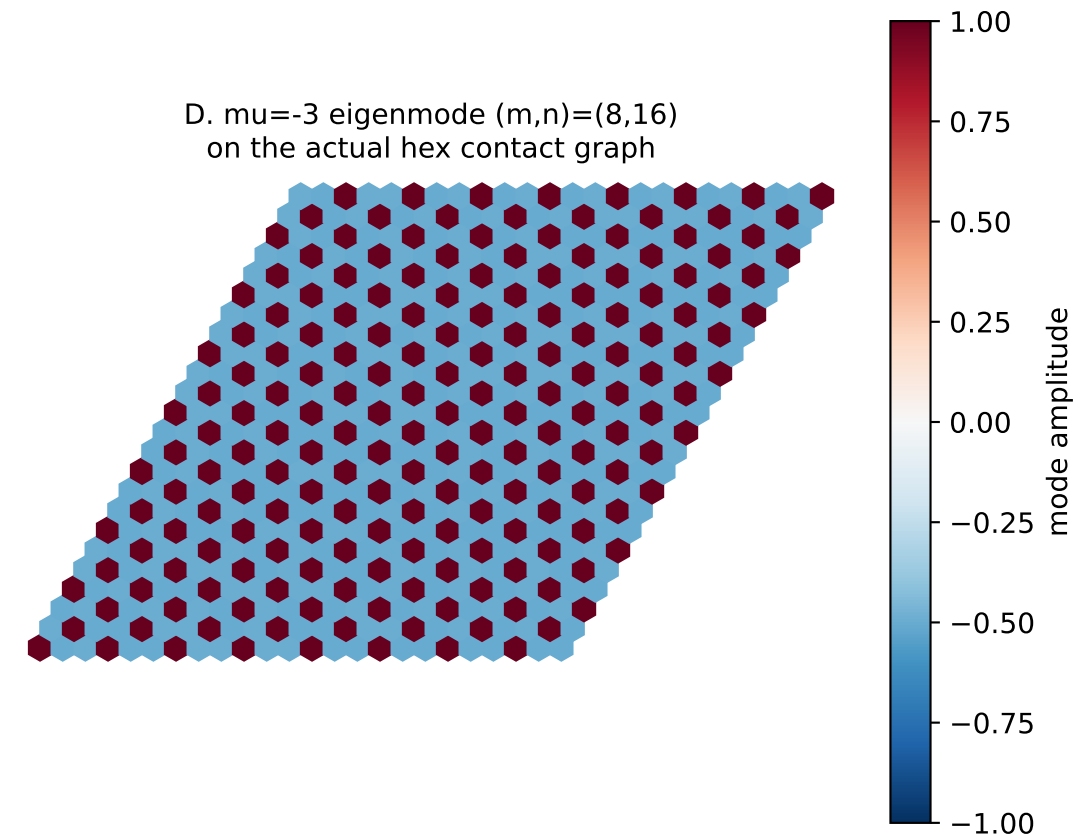

B. Graph dispersion $\mu(k_1, k_2)$
(numerical, matches closed form to $2.8e-14$)

C. Growth-rate surface at $\text{lam}_N=2.0$ (P2)
 $k=0$ stable, K-like strongest growth

D. $\mu=-3$ eigenmode $(m,n)=(8,16)$
on the actual hex contact graph

Polygons visualize the six-neighbour contact topology used by the simulation, not measured cell shape.
