
A
When is QSS accurate?
P2
P3
10% error
relative growth error
compensated turnover α
B
A fitted clock does not transfer exactly
full
DNA, clock fitted at P2
P3
P2
P3 prediction: −16.5%
growth rate at μ = −3
Notch production λN
C
Oscillatory entry, then real unstable pair
sample 679; G = 0.564 throughout
real part
|imaginary part|
K-mode poles
compensated turnover α
D
Same linear response, distinct large step
explicit proneural
production lag
clamped A: 2×
max difference 31.9%
fraction of final production change
time (dimensionless)
