
A
Oscillatory entry at unchanged static gain
sample 1730; G = 0.366 throughout
K-mode poles
real part
|imaginary part|
compensated turnover α
B
Oscillatory entry, then real unstable pair
sample 679; G = 0.564 throughout
K-mode poles
real part
|imaginary part|
compensated turnover α
C
All 12 first crossings are oscillatory
crossing frequency

reference sample ID
D
G stays below one along every path
unchanged static G(−3)
oscillatory boundary
later real-pair collision
turnover α
