A
Complete spectra: strictly negative leaders
full
DNA
leading real eigenvalue
selected endpoint index
B
Recovery relative to unperturbed continuation
paired distance / initial distance
time after relative 10⁻⁴ perturbation
C
Pure-mode full endpoint: all poles
max |Im| = 1.3e-12
(round-off scale)
imaginary part
real part
D
Independent sparse eigenpair check
scaled Newton residual
normalised sparse eigenpair residual
numerical residual
selected endpoint index
