
A
When is QSS accurate?
P2
P3
10% error
relative growth error
compensated turnover α
B
A slow pole alone is insufficient
relative growth error
|s_lead|/(αd_S)
log10 eigenvalue condition
C
Required turnover is family dependent
5% error
10% error
first sustained passing α on grid
family rank (separately sorted)
D
All 52 matched families
relative growth error
α
