
A
Same onset, different speed
$\lambda_N^c = 1.304815343$
for every α
$\alpha = 1$
explicit D-N-A-S
slow-S limit $d_S[G(-3)-1]$
DNA reduction (S slaved)
DN reduction (A, S slaved)
growth rate of $\mu = -3$ at P2
proneural timescale factor α
B
Global sample
equal rates
n = 1453
median ratio 4.9
reduction faster in 100%
DNA reduction λ_{pattern}
explicit model λ_{pattern}
C
Nonlinear growth at P2
explicit model
DNA reduction
fitted 1.5975
predicted 1.5975
window [0, 4.5]
fitted 0.1031
predicted 0.1031
window [0, 67.25]
K-mode amplitude of D / D^*
time t (dimensionless)
D
explicit model
DNA reduction
D at $t = 400$, P2
max $|D_{\text{explicit}} - D_{\text{DNA}}| = 7e-11$
